THE TIME AT WHICH COTTON USES THE MOST MOISTURE.¹

C. K. McCLELLAND.

It has long been recognized that cotton can be produced with less water than is required for crops of corn and oats. Not only is this true, but apparently there is a great difference in the stage of growth when these crops require the maximum amounts of water. A dry

¹ Contribution from the Georgia Agricultural Experiment Station, Experiment, Ga. Presented by the author at the second annual meeting of the Association of Southern Agricultural Workers, New Orleans, La., in January, 1917. Received for publication February 10, 1918.
