Thanks to Our Reviewers

Each published issue of *Agronomy Journal* is the culmination of the efforts of many people. The work of our Editorial Board is essential to the publication of *Agronomy Journal*. During the review process our editors work closely with both authors and reviewers. Editors provide valuable assistance to authors throughout the entire review process and they rely heavily on the recommendations provided by peer reviewers. All of our editors spend many hours of their valuable time performing their editorial tasks. I thank all of our Editorial Board, for without their efforts the *Agronomy Journal* would not be the preeminent publication that it is. I also extend particular appreciation to Managing Editor Susan Ernst for the final editing and the many other assignments done on behalf of *Agronomy Journal*.

Peer review is a fundamental function professionals perform in support of their science. The work performed by peer reviewers has a direct impact on the quality of a scientific journal. This is also the case for *Agronomy Journal*. Those who do peer reviews for *Agronomy Journal* provide valuable service to both our authors and the journal. They serve our authors through the comments and suggestions the reviewers provide to authors for improving manuscripts and reviewers serve *Agronomy Journal* by making recommendations to our editors if a manuscript should be published or not.

Each year we publish a list of reviewers in one of the issues of *Agronomy Journal*. We do this to thank our reviewers for their time and to recognize them in a small way for the important contribution they make to *Agronomy Journal*, our profession, and our science. On behalf of the 2012 Editorial Board of *Agronomy Journal*, I extend my thanks to all those scientists who have completed reviews of manuscripts submitted to *Agronomy Journal* during the past year. Many of the reviewers listed below reviewed more than one paper.

The list is compiled from our electronic submission and review system. We make a concerted effort to accurately list the names and affiliations of all our peer reviewers. If we have made an error in listing your name or affiliation correctly, it was done without intention and we offer our sincere apology. Again, we thank all those who have conducted peer reviews of manuscripts for *Agronomy Journal*. We hope you are willing to do more reviewing for us in the future.

— Bill Raun, Editor
