AN INDEX FOR MEASURING THE PERFORMANCE OF WHEAT VARIETIES AND STRAINS.

W. B. KEMP.

Agricultural experiment stations are frequently confronted with the problem of measuring the progress that has been made in variety testing, selection, or breeding of wheat and other small grains. This is comparatively easy, as long as a large group of older varieties

1 Contribution from the Maryland Agricultural Experiment Station, College Park, Md. Received for publication March 3, 1922.

2 Associate Agronomist.
