6 B. UTILIZATION OF THE SOIL SURVEY IN CROP EXPERIMENTAL WORK

DISCUSSION BY C. A. MOOERS

In this brief discussion I have in mind only such conditions as are found in Tennessee and similar parts of the South where residual soils predominate. Unfortunately, I am not in the possession of the experimental evidence which would enable me to speak with full assurance on all phases of the subject. The Tennessee agricultural experiment station has, however, conducted numerous crop experiments on widely different types of soil and out of the accumulated
