4. A SIMPLE TEST FOR DETECTING THE NUTRIENT NEEDS
OF CORN PLANTS1

(Abstract)

G. N. HOFFER2

Corn plants, during the latter part of the growing season, can be
used to determine the relative amounts of nitrates and potassium

1Abstract of paper presented as a part of the symposium on “Methods and
Relations in Extension Work in Agronomy” at the meeting of the Society held
in Chicago, Ill., November 16, 1925.

2Agent and Pathologist, Office of Cereal Investigations, United States De-
partment of Agriculture, and Associate Botanist, Purdue University Agricultural
Experiment Station.
