BIOLOGICAL ABSTRACTS
Covers the World's Biological Literature

How do you keep posted on the current literature in your field? Perhaps some relatively obscure journal has published an important paper on the very subject in which you are most interested. Informative, concise abridgments of all the significant contributions will be found in Biological Abstracts.

As well as the complete edition, covering all of the biological literature from some 3,000 journals, Biological Abstracts also is published in nine low-priced sectional editions to meet the needs of individual biologists. Section D (Plant Sciences) affords a very complete coverage of Agronomy and related fields — and it is priced at only $7.00 a year (Foreign, $7.50). Write for full information and a sample copy.

BILOGICAL ABSTRACTS
University of Pennsylvania
Philadelphia 4, Pa.

WHAT'S NEW IN CROPS & SOILS
For the dairy plant field man
For the county agent
For the high school teacher of agriculture
For the up-to-date farmer
For the seed tradesman
For the dealer in fertilizers, farm supplies, and farm machinery
For the country banker and businessman

A valuable magazine for all of your friends who are active in these fields. Recommend it to them as a worthwhile aid in their everyday work. It will help you help them.

$3.00 per year, U. S., Canada, and Pan-American countries; $4.00 elsewhere. Special group rates on request.

DEPT. AJ
WHAT'S NEW IN CROPS & SOILS
2702 Monroe Street
Madison 5, Wisconsin

A sampling of the 30 papers and their authors includes early ideas on inbreeding and crossbreeding by Conway Zirkle; beginnings of the heterosis concept, by G. H. Shull; physiology and gene action in hybrids, by W. G. Whaley; heterosis in population genetics, by A. A. Buzzati-Traverso; nature and origin of heterosis, by T. Dobzhansky; dominance and overdominance, by J. F. Crow; specific and general combining ability, by C. R. Henderson; and heterosis in a new population, by E. J. Wellhausen.

GRASSLANDS OF NEW ZEALAND

New Zealand, because of its climate, is probably more dependent on grasslands than any other country in the world. Over nine-tenths of her exportable wealth comes from grasslands, and their establishment and management are of primary importance in securing a high output of meat, wool, and dairy products.

Mr. Levy is director of the Grasslands Division of the Plant Research Bureau, and his position enables him to include results of the most recent research on grasslands in New Zealand.

The book opens with a two-chapter discussion on geographical, climatic and ecological aspects of grasslands. Nomenclature of pastures, development of plant cover and requirements of the various common pasture plants are discussed, and following chapters are devoted to strains and breeding of pasture plants, seed mixtures, establishment, intensive grassland farming, pasture weeds, some aspects of soil conservation and conversion of rain forest into grassland. In the two concluding chapters, Mr. Levy discusses the productivity of our grazing lands and the social relationships between urban and rural communities.

PROCEEDINGS OF THE BIHAR ACADEMY
OF AGRICULTURAL SCIENCES

The Proceedings will be published three times a year and will consist of papers submitted by members of the Academy. All communications and correspondence should be addressed to the Secretary of the Academy. The first issue contains the following articles: Inter-Varietal Hybridization in Luffa acutangula and Its Economic Significance — By R. H. Richharia; Determination of Exchangeable Cations of Bihar Soils — By S. C. Mandal; Size and Shape of Plots in Wheat Trials — By A. K. Mukerji; Studies of Ensuring Maximum Number of Fruit-Producing Population of Papaya by Various Methods — By P. C. Mallik and T. S. N. Singh; Cytological Studies in Loranthus — By R. H. Richharia and P. N. Ghosh; Studies in the Production of Carbon Dioxide in Stored Wheat Infested by Sitophilus granarius L. and S. oryzae L. — By B. K. Sinha; and Soils of Bihar and a New Method of Determining Their Manural Requirements — By H. N. Mukerjee.

PROCEEDINGS, JOURNAL MAY BE OBTAINED IN MICROFILM FORM

All back issues of the Soil Science Society of America Proceedings, including Volumes 1 through 15, are now available in microfilm form, under an agreement recently concluded by the Society with University Microfilms, 313 N. First Street, Ann Arbor, Mich. Volume 16 will also be available in microfilm form at the end of the current year.

Back issues of the Agronomy Journal beginning with Volume 41 and running through Volume 43 may be obtained under the same arrangement, and Volume 44 of the journal will likewise be obtainable at the end of 1952. Inquiries regarding both the Journal and the Proceedings in microfilm form should be addressed to University Microfilms.

Please mention the Agronomy Journal when writing to advertisers.
