Supplementary Figure S1. Nutritional balance index (NBI) in recently matured soybean leaves collected at R1, in three crop seasons. Treatments: 1) Non-inoculated control, 80,000 plants ha\(^{-1}\); 2) Non-inoculated control, 320,000 plants ha\(^{-1}\); 3) Non-inoculated control + N fertilizer, 80,000 plants ha\(^{-1}\); 4) Non-inoculated control + N fertilizer, 320,000 plants ha\(^{-1}\); 5) Inoculated with \emph{B. japonicum} strain CNPSO 2050, 80,000 plants ha\(^{-1}\); 6) Inoculated with \emph{B. japonicum} strain CNPSO 2050, 320,000 plants ha\(^{-1}\). Data represent means of six replicates. Different letters indicate significant difference (Fisher's test, \(p<0.05\)).
