Supplementary Material

Fig. S1. Effects of spraying B2 and ABA at different concentrations on enzymatic activity of ear leaf under HTS and normal condition. (A) CAT activity (B) POD activity (C) SOD activity (D) MDA content. Control, ABA and B2 indicate application of water, ABA and B2 under normal condition, respectively. Control+S, ABA +S and B2+S indicate application of water, ABA and B2 under HTS. Values with different letters are significantly different at P<0.05, compared within the same concentration only.
