## CONTENTS

Preface .....	ix
Acknowledgements .....	xi

### SECTION I. SOIL RESOURCES VARIABILITY

1. <b>Keynote Paper</b> Origin and nature of soil resource variability. J. Bouma and P. A. Finke .....	3
2. Mapping and managing spatial patterns in soil fertility and crop yield. D. J. Mulla .....	15
3. Terrain analysis for soil specific crop management. I. D. Moore, P. E. Gessler, G. A. Nielsen, and G. A. Peterson .....	27
4. Application of soil survey information to soil specific farming. M. J. Mausbach, D. J. Lytle, and L. D. Spivey .....	57
5. <b>Working Group Report</b> , C. S. Holzhey, Chair .....	69

### SECTION II. MANAGING VARIABILITY

6. <b>Keynote Paper</b> Some practical field applications. R. E. Ascheman .....	79
7. Yield mapping and application of yield maps to computer-aided local resource management. E. Schnug, D. Murphy, E. Evans, S. Haneklaus, and J. Lamp .....	87
8. Tillage considerations in managing soil variability. W. B. Voorhees, R. R. Allmaras, and M. J. Lindstrom .....	95
9. Weed distribution in agricultural fields. D. A. Mortensen, G. A. Johnson, and L. J. Young .....	113
10. Value of managing within-field variability. F. Forcella .....	125
11. <b>Working Group Report</b> , R. R. Johnson, Chair .....	133

### SECTION III. ENGINEERING TECHNOLOGY

12. **Keynote Paper** Sensing and measurement technologies for site specific management.  
S. C. Borgelt ..... 141
13. Positioning technology (GPS).  
D. A. Tyler ..... 159
14. Importance of spatial variability in agricultural decision support systems.  
G. W. Petersen, J. M. Russo, R. L. Day, C. T. Anthony,  
and J. Pollack ..... 167
15. **Working Group Report**, J. Schueller, Chair ..... 181

### SECTION IV. PROFITABILITY

16. **Keynote Paper** Profitability of farming by soils.  
N. C. Wollenhaupt and D. D. Buchholz ..... 199
17. Cost analysis of variable fertility management of phosphorus and potassium for potato production in central Washington.  
M. W. Hammond ..... 213
18. Macy Farms - Site specific experiences.  
T. S. Macy ..... 229
19. **Working Group Report**, D. Fairchild, Chair ..... 245

### SECTION V. ENVIRONMENT

20. **Keynote Paper** Best management practices for efficient nitrogen use in Minnesota.  
G. W. Randall ..... 257
21. Social issues related to soil specific crop management.  
P. J. Nowak ..... 269
22. Use of soil property data and computer models to minimize agricultural impacts on water quality.  
D. I. Gustafson ..... 287

23. Nutrient and pesticide threats to water quality.  
R. S. Marks and J. R. Ward . . . . . 293
24. **Working Group Report**, W. E. Larson, Chair . . . . . 301

#### SECTION VI. TECHNOLOGY TRANSFER

25. **Keynote Paper** Prescription farming.  
W. Holmes . . . . . 311
26. Illini FS variable rate technology: Technology transfer needs from  
a dealer's viewpoint.  
J. Mann . . . . . 317
27. Computerized recordkeeping for variable rate technology.  
J. S. Ahlrichs . . . . . 325
28. **Working Group Report**, D. Buchholz, Chair . . . . . 335

#### SECTION VII. POSTER SUMMARIES

29. Measuring yield on-the-go: The Minnesota experience.  
K. Ault, J. A. Lamb, J. L. Anderson, and  
R. H. Dowdy . . . . . 347
30. Multi-ISFET sensors for soil nitrate analysis.  
S. J. Birrell and J. W. Hummel . . . . . 349
31. Yield variability in Central Iowa.  
T. S. Colvin . . . . . 351
32. Managing variability of climate and soil characteristics.  
Characteristics in conservation tillage systems: Effects on field  
behavior of herbicides.  
Thanh H. Dao . . . . . 353
33. Soil landscape relations and their influence on yield variability  
in Kent County, Ontario.  
K. A. Denholm, J. D. Aspinall, E. A. Wilson, and  
J. L. B. Culley . . . . . 355

34.	A field information system for spatially-prescriptive farming. Shufeng Han and C. E. Goering . . . . .	357
35.	Machine vision swath guidance. J. W. Hummel and K. E. Von Qualen . . . . .	359
36.	MAPS mailbox - A land and climate information system. J. S. Jacobsen, A. E. Plantenberg, G. A. Nielsen, and J. M. Caprio . . . . .	361
37.	Leaching and runoff of pesticides under conventional and soil specific management. B. R. Khakural, P. C. Robert, and D. J. Fuchs . . . . .	363
38.	Spatial regression analysis of crop and soil variability within an experimental research field. D. S. Long, S. D. DeGloria, D. A. Griffith, G. R. Carlson, and G. A. Nielsen . . . . .	365
39.	Precision farm management of variable crop land in the Pacific Northwest. B. Miller, and R. Veseth . . . . .	367
40.	Management approaches to fertility and biological variation in the inland Pacific Northwest. W. Pan, B. Miller, A. Kennedy, T. Fiez, and M. Mohammad . . . . .	371
41.	Yield variation across Coastal Plain soil mapping units. E. J. Sadler, D. E. Evans, W. J. Busscher, and D. L. Karlen . . . . .	373
42.	Sensing for variability management. K. A. Sudduth, and S. C. Borgelt . . . . .	375
43.	Nitrogen specific management by soil condition. J. A. Vetsch, G. L. Malzer, P. C. Robert, and W. W. Nelson . . . . .	377
	List of Participants . . . . .	379
	Conversion Factors for SI and Non-SI Units . . . . .	391

## PREFACE

Historic agronomic practices have been developed with the farm or field as the area of management. The advent of soil conservation began to lead soil management toward topographic and soil-specific features. Even so, agronomic practices and recommendations have largely been made on a field basis rather than on soil-specific properties that might influence tillage, seeding, fertilizing and weed control practices. The near completion of detailed soil surveys nationwide, particularly in the intensive agricultural areas, has provided a database of great magnitude. The advent of computer processed spatial data together with geostatistical analysis enables the display of those soil, hydrologic, and micro-climate features relevant to agronomic practices. With the further development of positioning systems suitable to on-site applications, the capability now exists, or can be feasibly developed to deliver real-time, real-space changes in almost any agronomic procedures. There is also much current research in sensor technology applicable to the soil condition or property, such as organic matter content, moisture content, tilth, nitrate content, and crop yields.

Given the capability to assess soil spatial variability and modify agronomic practices accordingly, we now add two other considerations, economic and environmental. Historically, application of inputs, whether seed, fertilizer, or pesticide, has been driven by maximum yields. More recently, emphasis has become maximum economic yields. Soil specific management provides the specific needed inputs on each soil and prevents over and under application of inputs resulting from uniform field applications. The realization of maximizing economic returns will encourage the adoption of this new technology.

If further incentive or justification for soil specific management were needed, the national incentive to reduce the potential for environmental contamination is of concern to all of agriculture. To the extent that application of agri-chemicals can be modified on-the-go according to the potential for retention and transmission of these materials in specific soil conditions, there can be a reduction in ground and surface water contamination and general maintenance of soil quality.

The objectives of this workshop were to: (i) review recent and current knowledge and application technology with respect to soil specific management, (ii) outline the necessary research that will enable adoption of the full range of agronomic practices (tillage to harvest) for soil specific management, and (iii) identify development and technology transfer needs.

The workshop consisted of invited position papers on the topics of soil resources variability, managing variability, engineering technology, profitability, environment, and technology transfer. They were followed by several invited presentations detailing current research and development in each of the six areas. Participants were divided in six working groups corresponding to the same general topics and responded to discussion papers written prior to the workshop.

The workshop also had several poster sessions presenting a variety of specific research and application project results.

This book contains the keynote address papers, session technical papers, working group discussion papers, and recommendations made by the six working groups. It also includes abstracts of most poster presentations.

On behalf of all participants, we wish to express our gratitude to sponsoring organizations for their support and to ASA-CSSA-SSSA for publishing this document. We also wish to express our appreciation to all speakers for their excellent presentations and to all participants who made the workshop a success. We look forward to implementing recommendations, creating an electronic bulletin board system that will facilitate the exchange of information and development of specific management concepts and associated systems, and preparing a second workshop for 1994.

P. C. Robert, co-editor
