Oregon by W. E. Hall. Progenies were propagated in a bulk hybrid population with mass selection for smut resistance. Head selections were made in 1948 and the one that became Westmont was designated as 13358, is a soft red winter wheat selected from a bulk hybrid in the F₂ generation from the cross ‘Butler × Thorne’. It was developed at the Ohio Agricultural Research and Development Center and named and released in 1964. Fulton is adapted to Ohio and immediately vicinity. The variety withstands the heaving type of winter in very well. It has been higher in yield over a 9-year period, with 72 tests, than other commercial varieties in Ohio (Table 1).
