Supplemental Fig. S1. Transgenic and WT soybean at maturity in the second year yield test. Shoot dry weight (Shoot DW) and seed yield of soybeans growing under control (2.3 dS/m) and salt stress (7.5 dS/m) in greenhouse conditions in summer 2017. A common lowercase letter indicates no significant difference among means of soybean genotypes in the same stress treatment (mean ± SEM, Duncan’s test, \( p < 0.05 \)).
