Effects of Tall Fescue Endophyte Infestation on Relative Abundance of Small Mammals

The authors of the above paper apologize for the inadvertent omission of a reference that would have acknowledged the contributions of John W. Laundré and Timothy D. Reynolds to some of the discussion material that had been incorporated originally in another paper. The reference that should have been included is: “Preliminary Assessment of Small Wild Mammal Populations in Tall Fescue Habitats,” by M.R. Pelton, H.A. Fribourg, J.W. Laundré, and T.D. Reynolds, published in Tennessee Farm and Home Science 160:68–71.
