Fungicide Treatment of Wheat Seed: Is it Necessary?

An error occurred in the above article which appeared in the January-March issue, 1975 of the Journal of Environmental Quality. On page 119, second column, beginning 9 lines from the bottom, the amount of seed that would need to be consumed for a game bird to get a “probable lethal dose” should read Panogen-1,042 g; thiram-96.2 g; PCNB, HCB, or maneb-481 g; and captan or carboxin-11,904 g.
