Registration of S02-2259 Soybean Germplasm Line

J.G. Shannon,* D.A. Sleper, J.A. Wrather, and J.D. Lee

Soybean [Glycine max (L.) Merr.] germplasm line S02-2259 (Reg. No. GP-331, PI 643914) was developed by the University of Missouri Agricultural Experiment Station, Division of Plant Sciences-Delta Center, Portageville, MO, and released in May 2006. It will be useful as a parent because it combines high yield potential and disease resistance with 25% of its pedigree derived from the development of a new breeding line or cultivar.

Acknowledgments

The authors thank the United Soybean Board for financial support in the development of this germplasm line through funding from USB Project S220 “Development of High Protein Meal with Low Phytate, Enhanced Functionality, and Feeding Efficiency.”
