Maynard Scilley and Dick Rust have made some valuable contacts with legislators who have expressed interest in sponsoring the registration bill. A packet of information has been assembled for distribution to members of the National Resources and Agriculture Committee. Included in the packet are the revised bill drafted by Bud Finney and his committee and testimonial letters regarding Soil Survey gathered by Bob Lueth and others.

Progress toward registration of soil classifiers is moving at an encouraging rate; however, the road ahead will be rough and we will need help getting over it if we are to reach our goal. Each of you could create a more informed legislative body by discussing this proposal with your state representative and senator.

MINNESOTA'S 15 YEAR SOIL SURVEY PLAN—
A PROGRESS REPORT

The State Planning Agency made a presentation to the Minnesota Resources Commission requesting financial support of this survey project. Dr. W. L. Hueg, Jr., Dick Rust, and I attended the session and responded to questions. The Administrative Committee put together a draft of an act to support this project by legislative action. Copies of this have been given to a few legislators for their reaction. We hope they will see fit to introduce such legislation this year.

We have extra copies of the revised proposal (Dec. 1974) if any of you should want copies.

F. Maynard Scilley
