This article is one of four articles dealing with cementation of soils in Idaho. The other three articles were published in the Summer 1983 issue.

The sequence of the articles for continuity should be as follows:

4. “Soil Cementation in Idaho Soils—How to Identify, Describe, Classify and Interpret” by Glen H. Logan.

We regret the inconvenience and confusion that may have been caused by not having the articles published together and in the proper sequence.

A Second Tour in Indonesia

H. H. Bailey

In 1959–1961, I spent 2 years in Indonesia as a member of a Univ. of Kentucky Contract Team. During that time I served as a lecturer in the Faculty of Agriculture of the Univ. of Indonesia at Bogor, an island of Java. I taught basic soil science and soil conservation courses to Indonesian students while their regular professors were studying abroad. The old faculty of Agriculture has since been organized as a separate institution, and is now called the Institut Pertanian Bogor (IPB-Institute of Agriculture, Bogor). It has emerged as the flagship of agricultural instruction in Indonesia. Many participants, who were sent to the USA under sponsorship of the original Kentucky project, now hold top administrative, teaching, and research positions throughout the Indonesian government and among institutions of higher education.

Twenty-two years later, I have returned to Indonesia. On this assignment I am stationed with the Faculty (college) of Agriculture at the Univ. of Sriwijaya, Palembang, South Sumatra with another Univ. of Kentucky team. Here we are working in cooperation with the Western universities. Agricultural Education Project (WUAEP), which is an association of the 10 public institutions of higher education on Sumatra plus one in West Kalimantan (West Borneo). Our project is designed to assist in the development of colleges of agriculture, within nine universities, and provide some assistance to two teacher training institutions. The project is a joint undertaking between the Government of Indonesia (GOI) and the U.S. Agency for International Development (USAID),
