rotation, the Kenyon soils, 5 to 9% slopes, have gone from a dominant condition of only slightly eroded to approximately 90% of the total acres of this slope class now being moderately eroded. This is very near the present moderately eroded percentage of the Clarion soils on 5 to 9% slopes. If this observation is anywhere near accurate, we have been losing topsoil at a much faster rate than suspected by many soil conservationists and farmers.

Analysis of Income and Expense

\textit{Soil Survey Horizons}

(1984 Volume)

\begin{align*}
\text{Income:} & \\
898 \text{ Subscriptions} & \quad 6,316.00 \\
\text{Back volumes, single issues sales} & \quad 52.25 \\
\text{Total income} & \quad 6,367.25 \\
\end{align*}

\begin{align*}
\text{Expenses:} & \\
\text{Composition, printing, paper} & \quad 3,881.22 \\
\text{Distribution} & \quad 721.06 \\
\text{Personnel costs} & \quad 2,852.99 \\
\text{Headquarters office expense (overhead)} & \quad 1,487.33 \\
\text{Total expense} & \quad 8,942.60 \\
\text{Excess of expenses over income} & \quad 2,575.35 \\
\end{align*}

The above analysis is presented for your information. Because of our deficit, the subscription price for the 1985 volume year was increased to $10.00. The deficit was due largely to the increased size of the publication, which added to the overall expense. The number of pages of text increased a full 35% between the 1983 and 1984 volumes. The Editorial Board would like to thank those who contributed articles and information.

Tenth Annual Meeting of the Association of Ohio Pedologists

Rick Robbins\textsuperscript{1}

The 10th Annual Meeting of the Association of Ohio Pedologists (AOP) was held Jan. 23, 1985 at the University Hilton Inn, in Columbus, OH with 43 members present. Robert Teater, former director of the Ohio

\textsuperscript{1}Secretary-Treasurer, soil scientist, Hardin County Soil Survey, Ohio Dep. of Natural Resources, Div. of Soil and Water Conservation.
