JUST ANOTHER DAY

Published August 4, 2015

Epoth my last month this soil 219 acres

Mit my last month this soil 219 acres

When I was told by the soil scientist that the stand on the river was so good that they asked if they could study it further, I knew I had to share their excitement. The soil was rich and the crops looked healthy. A good day for farming.

Spent my last month exploring the soil type and trying to understand its characteristics. I went to some length to get a good picture of the soil, but it was a challenge. The soil was a mix of clay and sand, which made it difficult to work with.
