Profiles in History—Kerry Arroues' Retirement Celebration

There was an error in the Profiles in History in the January 2013 *Soil Horizons* issue. The Kerry Arroues' retirement celebration piece included an incorrect soil description. The profile description of the anthropogenic soil at Dodger Stadium is a thin \(^{A}\) horizon with matted roots over a \(^{C}\) horizon over an M horizon that is a liner installed for both irrigation and drainage purposes, over a \(^{C'}\) horizon below the liner.

Also, Randy Riddle is the Soil Survey Project Leader for Los Angeles County, South-eastern Part.
