NOTES FROM READERS

Dr. James Thorp of Earlham College, Richmond, Indiana, comments in a recent letter that the soil surveyor pictured on page 3 of Vol. 7, No. 1, SOIL SURVEY HORIZONS doesn't seem to mind getting his right hand dirty. If you want to keep your right hand clean for working on the soil map, "test the soil in the left hand ... this was especially important when we used a plane table with white linen paper."

(Good advice, J. T.! Close inspection of the soil surveyor pictured on page 3, Vol. 7, No. 1, SOIL SURVEY HORIZONS, however, indicates that the soil surveyor is doing O. K. He is left handed! - Ed.)

* * * * *

Special intelligence from New Mexico indicates that the boys in the field are unhappy that Miss Polly Pedon no longer makes regular appearances in SOIL SURVEY HORIZONS. A special communication also indicates that Dick Folks is the real author of the Soil Survey of the Cabezon Area, New Mexico, mentioned in HERE AND THERE on page 22, Vol. 7, No. 1, SOIL SURVEY HORIZONS.

(We're sorry about that, Dick. But Miss Pedon sends a big hug and kiss to make up. O. K.? - Ed.)
