All soil scientists in Nebraska now have a suitable tape for measuring and marking soil horizons in photographs of soil profiles. Adjustable white arrows on the tape mark the lower boundaries of the A and B horizons in a Burchard clay loam profile shown above.

These tapes may be ordered from Mrs. R. S. Pollock, Hebron, Nebraska, U.S.A., for $4.50 each. Certain states have already purchased tapes for their soil scientists. No longer is there a need to photograph an old auger, spade, hat, or small, unreadable steel tape for scale against your favorite soil profile.
