more useable.

Being aware of this fact, Mississippi has published a supplement to the soil survey of DeSoto County entitled "Soil Interpretations for DeSoto County, Mississippi". This 71 page document including color maps gives the soil limitations for all soils in the county for home sites, trafficways and streets, septic tank filter fields, sewage lagoons, sanitary landfills, erosion hazard, intensive play areas, artificial reservoirs, intensive camp areas and limitations for town and country planning and development.

This is another way to increase the use of soil surveys for city planning boards, contractors, engineers, architects, realtors and others.

Favorable comments on this publication have been received from throughout the country.

SOIL SCIENCE SOCIETY OF AMERICA MEETINGS
August 21-26, 1966 at Stillwater, Oklahoma

F. D. Hole
University of Wisconsin

More than 3,000 soil and crop scientists and members of their families assembled on the beautiful campus of Oklahoma State University in August for the 58th annual meetings of the American Society of Agronomy. The bright green of the felt-like lawns of Bermuda grass contrasted with the vivid red of the soil being cultivated around shrubs and trees. The weather was cool. It rained all day Tuesday. Natives of Oklahoma were astonished. They had expected 100-degree sunny weather against which the air-conditioned buildings were proof.
