Anybody fulfilling requirements for the Ph.D. in soil genesis, classification, mapping and interpretation will not have to work any harder than a soil surveyor works in hilly country on a hot summer day when he’s doing 300 acres in detail per day. But he will have to have proficiency in a language other than English to permit communication of international scientific scope. That is why music is the perfect language. It is truly international, and is useful in communicating to anybody whose sense of hearing is still intact. We all know that the handle of a soil auger has a way of whistling in the wind, but we have not all
