Oxidative Coupling of Phenols and Anilines by Peroxidase: Structure-Activity Relationships

D.F. Berry and S.A. Boyd

On page 568, the third and fourth lines of the third paragraph should read as follows: "In both cases $\rho$ is negative $[\rho$ (anilines) $= -5.30$ (not $-3.33$), $\rho$ (phenols) $= -2.51$ (not $-1.67$)] showing that . . . ". Also, the reaction formula at the bottom of column 1, page 568 and the top of column 2 on page 568 are reversed.
