ERRATA

Estimating Michaelis-Menten or Langmuir Isotherm Constants by Weighted Nonlinear Least Squares

P. Persoff and J.F. Thomas

1. In the first line Eq. [3], the subscript \( i \) is missing from the \( w \) following the \( = \).
2. The first line of Eq. [7] should read:

\[
0 = \frac{\partial}{\partial b} \Sigma w_i (e_i/a)^2 = \Sigma w_i \frac{\partial}{\partial b} (e_i/a)^2
\]

3. The first appearance of \( w_i \) in Eq. [9] should be preceded by the factor \(-2\).
4. In Table 2, Line 400 of the BASIC program should read:

\[
J1 = (-2 * (W(I)))/P5 \ ^2 \ * \ (P5 \ * \ P6-P7)
\]
