ADAPTING THE J. D. ROBERTS ODOMETER TO FORD CARS USED IN TRAVERSE WORK.*

By

L. R. Schoenmann
Of The
American Rural Planning Association

The accompanying drawing illustrates the manner in which the odometer has been adapted to the accurate measurement of short as well as long distances when used on a Ford car. This model has been tested out in actual traverse work for the Bureau of Soils, and has proven to be entirely satisfactory. On the following page is given a full description of the parts required in adapting the odometer to the Ford car.
