The Committee on Soil Geography presents no formal report. It exists primarily for the purpose of securing the presentation to the Association of papers on soil geography and related subjects.

The Committee's contribution to the program of this meeting is devoted chiefly to the discussion of the relationships between soil features and the distribution of human population.

If the Committee be continued it is proposed in the future to encourage presentation of papers dealing with correlations between the distribution of soils and other physical and biological features, which can be given geographic expression.

The Committee hopes to direct the attention of geographers to the geographic value of the soil surveys. To this end it is proposed to ask at least one geographer outside of our Association to contribute to the part of the program prepared by this Committee.

Respectfully submitted,

Mark Baldwin, Chairman
T. D. Rice
W. E. Tharp
J. W. Moon
James Thorp
