REPORT OF COMMITTEE ON SOIL NOMENCLATURE

By
G. W. CONREY, CHAIRMAN

During the past year the committee has considered the definitions of terms having to do with (1) land utilization, (2) soil erosion, and with foreign terms used in American soil work. The reports of the subcommittee concerned with the first two have been presented at this meeting. The definitions reported are considered as tentative. It is urgently requested that members of the Association examine these definitions critically and report to the chairman of the committee any suggested additions, subtractions, or changes. The report on terms introduced from foreign languages has been withheld until action can be taken by the committee on nomenclature of the International Society of Soil Science. Your committee proposes to cooperate to the fullest extent possible with the committee on soil terminology of the International Association.
