Supplemental Fig. S1. Inorganic N evolution (upper raw), $^{15}$N atom% excess and organic $^{15}$N atom% excess during the four time intervals of the isotope dilution experiment (day 0-3, day 6-9, day, 21-26 and day 60-65). Error bars represent standard deviation of the estimated mean rates (n=3). R: Raw solids RA: Acidified raw solids, D70: Solids dried at 70 °C, AD70: Acidified solids dried at 70 °C, D160: Solids dried at 160 °C, AD160: Acidified solids dried at 160 °C.
